

# RAID It

With the high demands of video production, including expensive equipment, top-of-the-line software, and super computers with dual core processors, you still need more juice to pump out that HDV output. Take a look at NewerTech's Guardian MAXimus™ RAID 1 storage, that has up to 1-terabyte of dual-drive solutions. The Guardian MAXimus acts a mirror storage system, while writing the same information in real-time in two separate drives, creating an instant back-up. It connects via FireWire 400, FireWire 800, or USB2 interface, and backs up your critical data, video, or anything else on your computer so that when your hard drive crashes, you won't have to lose everything.

(Starting at \$320.)
