

Voyager Docking Station

The **Voyager Q Hard Drive Docking Station** turns any 2.5-inch or 3.5-inch serial advanced technology attachment into a fully bootable and hot-swappable external drive, reports Newer Technology Inc. It features two FireWire 800 ports, one FireWire 400 port, one USB 2.0 port, and an external SATA port.

Compatible with both Apple Inc. Macintosh and PC computers, the docking station offers data transfer rates up to 300 MB per second, and includes an eject lever for hard drive removal.

Users can easily detect the status of the docking with the two color LED lights at the front of the device; blue indicates power on, and flashing red indicates disk activity.

NewerTech is located in Illinois (www.newertech.com).
